

## Product Overview

# Biggo Swings

A creative approach to a playground favourite.

[dynamoplaygrounds.com](https://dynamoplaygrounds.com)

# Multi-User & Multi-Directional

Our fully accessible Biggo Swing can be used by **up to four children** of any age at a time! All sharing the wonderful sensation of safely soaring through the air in our unique parabolic arc.

The dish-like swing conjures up shared images of soaring space ships or flying carpets, all while helping **children of all abilities** develop their balance, equilibrium, and social interaction.

*The best things in life are shared, so  
Dynamo took a traditional  
playground favourite and made it  
even better.*

**Revolutionized the swing industry with its unique design. Our Biggo Swings are multi-user 2-fro or multi-directional swings.**

**These swings appeal to children of all ages and abilities while giving them an unpredictable thrill sensation.**

**Encourages more social interaction and inclusivity. Plus, our Biggo Swings are ADA Accessible.**

# Swing Combinations

All swings come in **different assemblies**.

We also provide **accessible seats**, tailoring to specific client needs.

# Frequently Asked Questions

Get to know our Biggo Swings by reading some of our most commonly asked questions.

# How are Biggo Swings accessible?

It is important to us to make games that all children can use, no matter their abilities!

All swings are at a **required height of 12"-18"**, allowing children with reduced mobility to be transferred onto the swing.

These swings are made with a **concave dip in the centre**, which creates a gravitational pull, keeping children centered while they swing.

Our aim is to **cater to the different needs** of communities.

# How safe are Biggo Swings?

Our Biggo Swings are designed with safety in mind.

Our seats are **made of aluminum**, which allows it to take longer to heat up during sunny days - keeping kids safe as they play!

The seat is surrounded by a **hollow, rubber bumper**. This means if a child is hit by the swing, the shock is absorbed by the rubber and dispersed throughout the ring.

This is why after impact testing, this seat scores 16 HICs, **the lowest in the industry!**

## Can I change the seat color of the Biggo swing?

If you want to change the color of the seat you can do so for **an added charge** but remember, when needing to replace the seat, the color change can make the process a tad more difficult.

Also, please keep in mind - there is only **one color possible for the rubber bumper**. To tell you the truth, the paint color of the seat is chosen for a reason.

After our years of experience, we know that it is the best performing and longest lasting option.

# Can I buy the seat and combine with my own frame?

**Safety and durability** is a high priority at Dynamo. **We do not combine our swings with other posts** due to concerns in structural integrity and quality of material.

We want to ensure the game we give you will last.

We specifically design our swings and posts with **weight and structural quality in mind**.

Whether you have 4 kids or 8 kids playing together, know our swing systems can take the weight!

# What is the difference between your Biggo Swings?

Our swings can also be **combined with traditional swing bays**, catering to all kids in your communities.

The **Biggo Ovni** and **Tres** are multi-directional swings that bring an exciting, unpredictable thrill to our swing families.

We even took it up a notch with our **Biggo Tres**, letting kids stand or sit while they enjoy the swing!

## Does water get trapped inside?

All Biggo swings have holes in the centre, **allowing water to easily drain out** of the swing. Rain or shine - know that water won't get trapped in the swing!

## Can the multi-directional swings hit the post?

The swings cannot hit the post. There is a **clearance zone** between the swing and the post, ensuring the safety of kids as they play!

## Do your swings take up a lot of space?

Our swings are **perfect for any space requirements**. Think of it like this - how many traditional swing bays would be needed to hold this amount of kids? We've created a **space conscious**, fun, inclusive way for kids of all ages to enjoy the swing together, without compromising your footprint!

## How long does it take to manufacture?

Our standard games take **roughly 12-14 weeks** to produce. For games with more customized accessories, production times can be increased.

## **What happens if a multi-directional swing detaches from the post?**

Although it is very unlikely that the seat would ever detach from the post, there is a safety chain attached that would secure the seat and prevent it from a complete detachment so it never falls to the ground.

## **Do I need to buy replacement chains from Dynamo?**

No! With galvanized steel chains, customers can go to their local supply store and to purchase and replace the chains.

# What if a customer requests ropes instead of chain?

Although **we do not advertise it or suggest it**, we can provide rope instead of a galvanized steel chain for orders in Europe.

In this case, we would also provide **a rubber sleeve** to go over the rope to prevent children from flipping it around.

We **do not offer this option** to orders being installed in the USA.
