

Product Overview

Frame Nets

A fully immersive,
3D play experience.

dynamoplaygrounds.com

Fun in a Frame

- Works in a **variety of playspace sizes**
- **Fully transparent** allowing parents and guardians to see children at all times
- Options for **children from 5-12**
- Children climb inside & outside of frames through **multi-level planar nets**
- Challenges children to **think critically and strategically** as they play
- **Staggered rope cell construction**, keeping kids safe as they climb

Dynamo's playground equipment has a significantly smaller environmental footprint than traditional playgrounds.

Designed to challenge your thinking, our Frame Nets provide a three-dimensional experience.

Frame Nets invite children to explore through the use of free play. The intricate net structure encourages critical thinking.

These games can be customized to include the addition of spinners, slides, rope bridges, panels, and pendulum steppers.

Frequently Asked Questions

Get to know our Frame Nets by reading some of our most commonly asked questions.

What's the difference between a Frame Net and a Mast Net?

While Mast Nets allow children to climb high, Frame Nets let children climb on and through the frames. This challenges children to think strategically as they climb, working their fitness, agility, navigation and decision-making.

Do you have options for younger children?

Though these games focus on the 5-12 age group, we have many other games that appeal to younger children, allowing them to get acquainted with rope play and climbing skills!

Can this game be customized?

Yes! We are able to customize these game to your communities. Accessories include:

- Slides
- Panels
- Handholds
- Pendulum Steppers
- Spinners
- PE Panels
- Rope Bridges

Do Frame Nets need to be retensioned?

Net re-tensioning is sometimes required after the first 60-90 days of use (a “settling-in” period) and then need to be checked again at regular intervals, as per the set maintenance schedule set by the purchaser. Depending on the size of your net, weathering and volume of kids playing, retensioning will be required at least once in its lifetime.

Are these games accessible?

We can create layered play, allowing wheelchair bound users to play beneath the netting, pulling themselves along using the pendulum steppers or coconut rope! In addition, for children with cognitive disabilities, the bouncing and swaying sensation offered by rope-based games offers vestibular stimulation.

Can my Frame Net be made of wood?

We appreciate the value of natural materials which often brings up this question, which has led Dynamo to invest considerable time and effort into developing the Nature's Aura product line.

Produced using engineered glulam beams, these structures have all of the necessary dependability to meet Dynamo's high quality standards for a stringent adherence to structural specifications which natural wood members may not have.

How much maintenance do Dynamo games require?

Dynamo's games are designed with sustainability in mind. They are relatively low maintenance and designed to be durable and long-lasting.

Each game will have a set of instructions for best practices of maintenance, and Dynamo offers a comprehensive program for game parts to ensure children can get as much play out of each of our games as possible.

What solutions do you offer for fraying rope?

Our ropes have either a stainless or galvanized steel interior, which means that if fraying happens on the exterior rope, the interior of the rope will not be damaged. We offer quick fixes for rope fraying. Our 2-sleeve aluminum repair system allows for any rope damage to be quickly covered, keeping your game operational.

Can I choose the colors?

Dynamo offers a range of colors for ropes and posts. We can work with your theme and color scheme to bring your vision to life! Looking for specific colors for your posts? Provide us with an RAL number and we will aim to match your color at an extra charge.

How long does it take to manufacture a Frame Net?

Our standard games take roughly 12-14 weeks to produce. For games with more customized accessories, production times can be increased.

How are the games sustainable?

At Dynamo, we are very conscious about environmental factors. We follow the dual practices of minimal materials, and maximum durability. Dynamo games use significantly less resources to produce a structure than more standard types of equipment accommodating equal numbers of children. Dynamo games also typically have a longer service life than traditional play equipment; often double the useful life span.
