Mast Nets

The sky really is the limit!

dynamoplaygrounds.com

Ultra-modern, Sky-high Structures

- Allows users to develop **spatial skills** as they climb
- **Challenges children** to overcome fears through play
- Nets are built at **varying heights**, giving children new obstacles
- Encourages **critical & strategic thinking**
- Tests **mental & motor skills**
- Options for **children from 5-12**
- **Accessible** options available
- Starts at 8' and can be **as tall as 32'**
- Can be accessorized with slides or mats - adding to the adventure!

Our Mast Nets continue to revolutionize the look of playscapes around the world, in a very big way.

With intricate geometric rope construction, our Mast Nets encourage children to think strategically while they play.

Though these nets are tall, the staggered rope construction ensures kids do not fall far before another rope cell construction catches them.

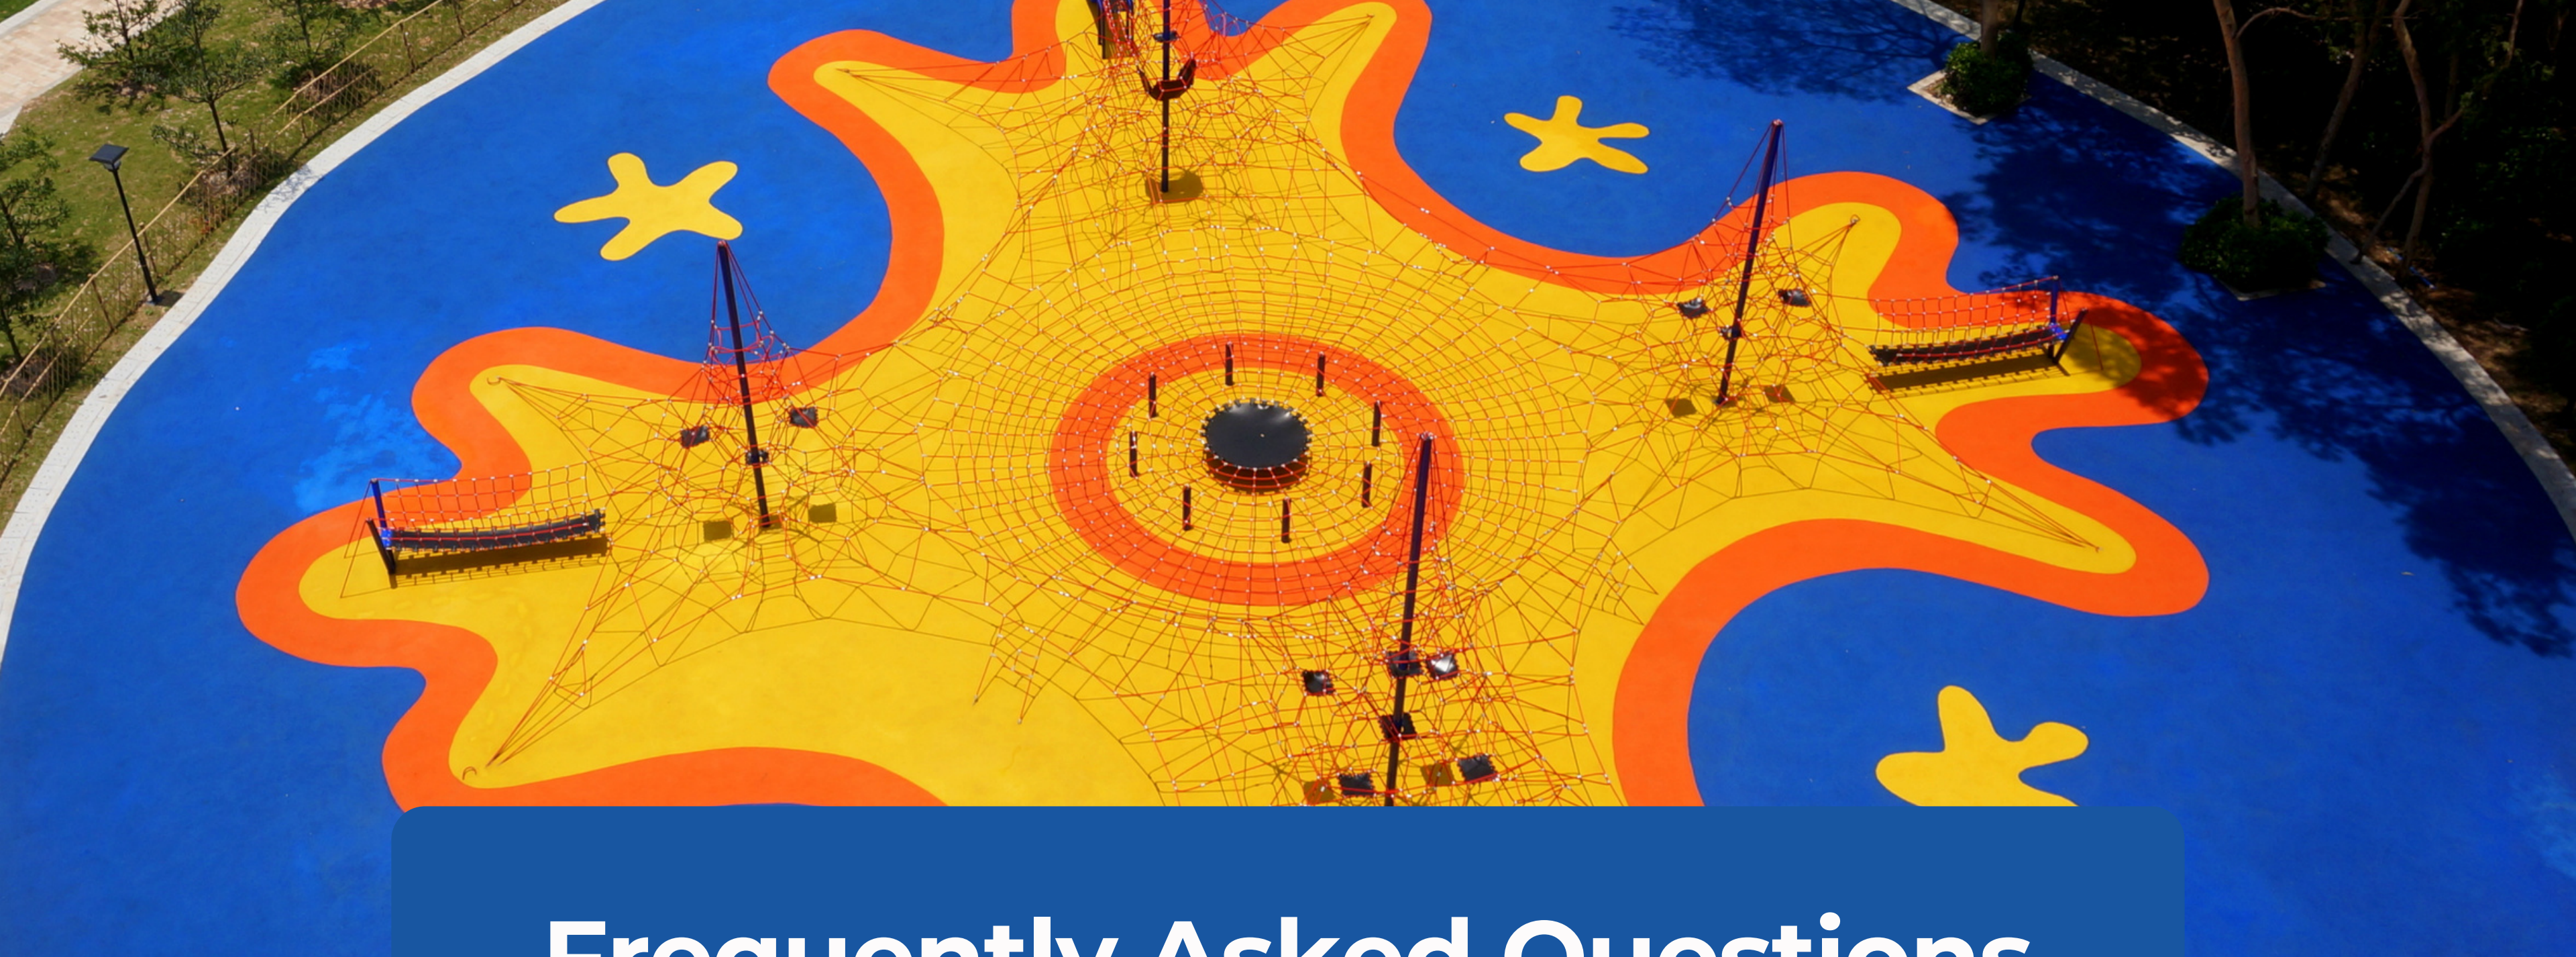

Our ropes are long-lasting, flame retardant, and come in a variety of different colours.

Frequently Asked Questions

Get to know our Mast Nets by reading some of our most commonly asked questions.

How does the post system work?

The centre post has a short inner post which gets bolted to the foundation. The centre post is then put over the inner post plate. This allows for more flexibility in the post. This means that as kids play in the nets, the post will not snap from excess tension.

Can I have two nets of different heights?

Yes. Most nets of different heights can be combined to add more challenge to the playground, allowing kids to play longer, and grow with the game at their neighbourhood park!

Can I attach accessories?

Yes! Our mast nets come with a variety of accessories. This includes slides, rope bridges, mats, and many more.

Are Mast Nets accessible?

We can create layered play, allowing wheelchair users to play beneath the netting, pulling themselves along using the ropes! We are also able to add mats for added accessibility.

In addition, for children with cognitive disabilities, the bouncing and swaying sensation offered by rope-based games offers vestibular stimulation.

What about net retention?

Mast nets will need to be retensioned at least once in their lifetime. The point a net needs retensioning will depend largely on how often it is being used. Dynamo provides a maintenance schedule allowing your park maintenance teams the ability to check nets on a regular basis.

All nets have multiple in-ground access points. The rope is attached to a shackle, then attached to a turnbuckle, connected to the base plate.

Ropes are retensioned by turning the turnbuckle one corner at a time. If the turnbuckle is at its maximum and the rope still needs additional tension, the turnbuckle can be moved to another hole further back on the base plate.

How do you access the turnbuckles?

Our PIP boxes use stencils to create a small seam surrounding the PIP box lid that allows access to the turnbuckles. PIP boxes can be used when rubber or turf surfacing systems are installed around the mast nets.

Do you have options for younger children?

Yes, we do! Our mast nets come in a variety of sizes, starting as short as 8'! This allows for kids between ages 2-5 the chance to get acquainted with rope play and climbing - just like the big kids!

What solutions do you offer for fraying rope?

Our ropes have either a stainless or galvanized steel interior, which means that if fraying happens on the exterior rope, the interior of the rope will not be damaged. We offer quick fixes for fraying rope. Our aluminum vandalism repair sleeves allow for any rope damage to be quickly covered, keeping your game operational.

How long does it take to manufacture?

Our standard games take roughly 12-14 weeks to produce. For games with more customized accessories, production times can be increased.

What happens if a child jumps from the top rope?

Our ropes are very flexible, making it difficult for a child to simply jump off. The nets are also always underneath the children when they have climbed high, offering a net to catch them in the event of any jump or fall.

Play patterns are that children normally use the nets facing inwards, with three points of contact on the net at any time. The nets are so fun and engaging that the children don't need to search for more thrills.

What happens if a child fall inside the net?

Firstly, all of our nets are rigorously tested for CSA, ASTM, EN standards by our onsite compliance officers. Our main goal is to ensure that while kids enjoy the adventure, they are safe while they play as well! Our nets are built with staggered cells, meaning if a child falls within the net, they will not fall far before another rope cell catches them - nor will they fall directly to the bottom of the net.

Do you provide CAD files?

Absolutely! While working with you and your team, we will provide you with the tools and resources needed to ensure the game works within your space requirements.

Can I choose my colors?

Dynamo offers a range of color choices for ropes and posts. We can work with your theme and color scheme to bring your vision to life! See our Color Choice Guide for more details. Looking for specific colors for your posts? Provide us with an RAL number and we will aim to match your color at an extra charge.

Is there a warranty?

Yes, we proudly stand behind the quality of our games, and are happy to offer a range of warranties, including 5-year coverage for nets and a 10 year warranty on our metal posts & molded metal parts. We have a full warranty page with all of the details!
